

The High Performance E-Z Lift Round Sling

The High Performance E-Z Lift is made of an ultra – high molecular weight polyethylene that is used in a patented gel-spinning process. Used also in other applications by NASA & the US Military, this fibre and process make the High Performance E-Z Lift the premier round sling with advantages such as:

- 1) The highest strength to weight ratios
- 2) Pound for pound 10 times stronger than steel
- 3) Excellent flex fatigue and internal fibre-friction characteristics
- 4) Melting point of 150 degrees Celsius or 300 degrees Fahrenheit
- 5) 40 percent greater strength than Aramid fibre
- 6) Exceptional resistance to UV Light and Chemicals
- 7) Superior High – load Strain-Rate velocities
- 8) Extraordinary resistance to cuts & abrasions

To compliment this high performance fibre, we enclosed it inside a double cover Cordura sleeve for enhanced durability & resistance to cuts & abrasions.

This combination makes the High Performance E-Z Lift the strongest, lightest and most user friendly round sling available today.

Each sling is manufactured to ASME B30.9 Standards as required by law.
User Friendly & Repairable
